A RECRUITING TOOL I BUILT

Internship CRM

It follows recruiting email through the interview pipeline, keeps every contact and follow-up in one place, and fills contacts in from a LinkedIn link.

Situation | Solution | Design | Result

APPLICATIONS

35

followed from first email on

CONTACTS

52

with follow-ups in one queue

INBOXES

2

Gmail and UT Outlook, matched

LINKEDIN LINK

1

is all a new contact needs

Situation, solution, design, result.
Swipe through how it came together.

SOLUTION

One CRM, three jobs

Recruiting ran through two inboxes and LinkedIn. One page now brings it all together, built with Claude as my coding partner.

1

Follow every email through the pipeline

Recruiting mail from both inboxes is matched to its application, so each stage stays current.

TAB APPLICATIONS · LIVE ACTIVITY

2

Track every contact and follow-up

One editable grid of contacts, with a queue of who has waited longest for a reply.

TAB OVERVIEW · NETWORK

3

Fill contacts in from LinkedIn

Paste a profile link and the name, title and company fill themselves in.

TAB NETWORK

All on one page, in four tabs: Overview, Applications, Network and Live activity.

DESIGN · EMAIL TO PIPELINE

Every email moves a stage

Each recruiting email is matched to its application, so the stage and next step update themselves.

Recruiting email, matched to the pipeline

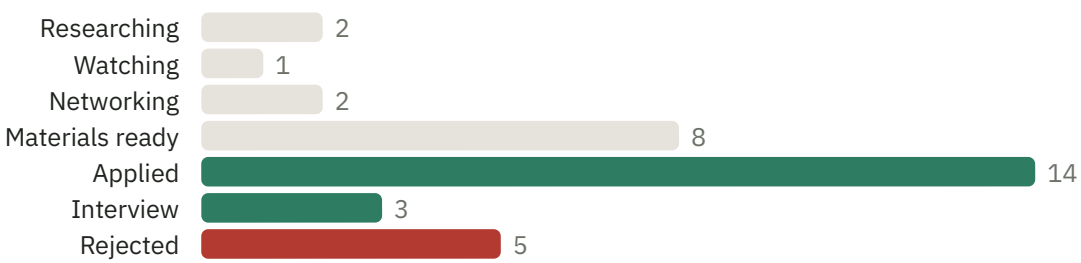

Sample data

Each email moves its application to the right stage

Sep 24	Gmail	Northwind Labs: thanks for applying	→ Applied
Oct 8	Gmail	Northwind Labs: schedule your first interview	→ Interview
Oct 20	Gmail	Northwind Labs: final round on Nov 4	→ Interview
Oct 21	UT Outlook	Meridian Bank: an update on your application	→ Rejected

The last row came only to my school inbox, and it still landed on the right application.

Pipeline by stage

DESIGN · CONTACTS

No follow-up slips through

Every contact sits in one grid, and the follow-up queue puts whoever has waited longest at the top.

Follow-up queue

Sample data

Ordered by who has waited longest

Contact	How we met	Last contact	Waiting
John Doe Harborpay	Info session	Sep 30	31 days
John Doe Copperleaf Systems	Alumni intro	Oct 6	25 days
John Doe Northwind Labs	Career fair	Oct 14	17 days
John Doe Bluefin Analytics	Coffee chat	Oct 18	13 days

Every contact, one editable grid

Edits save as you go, with checks for dates and duplicate names

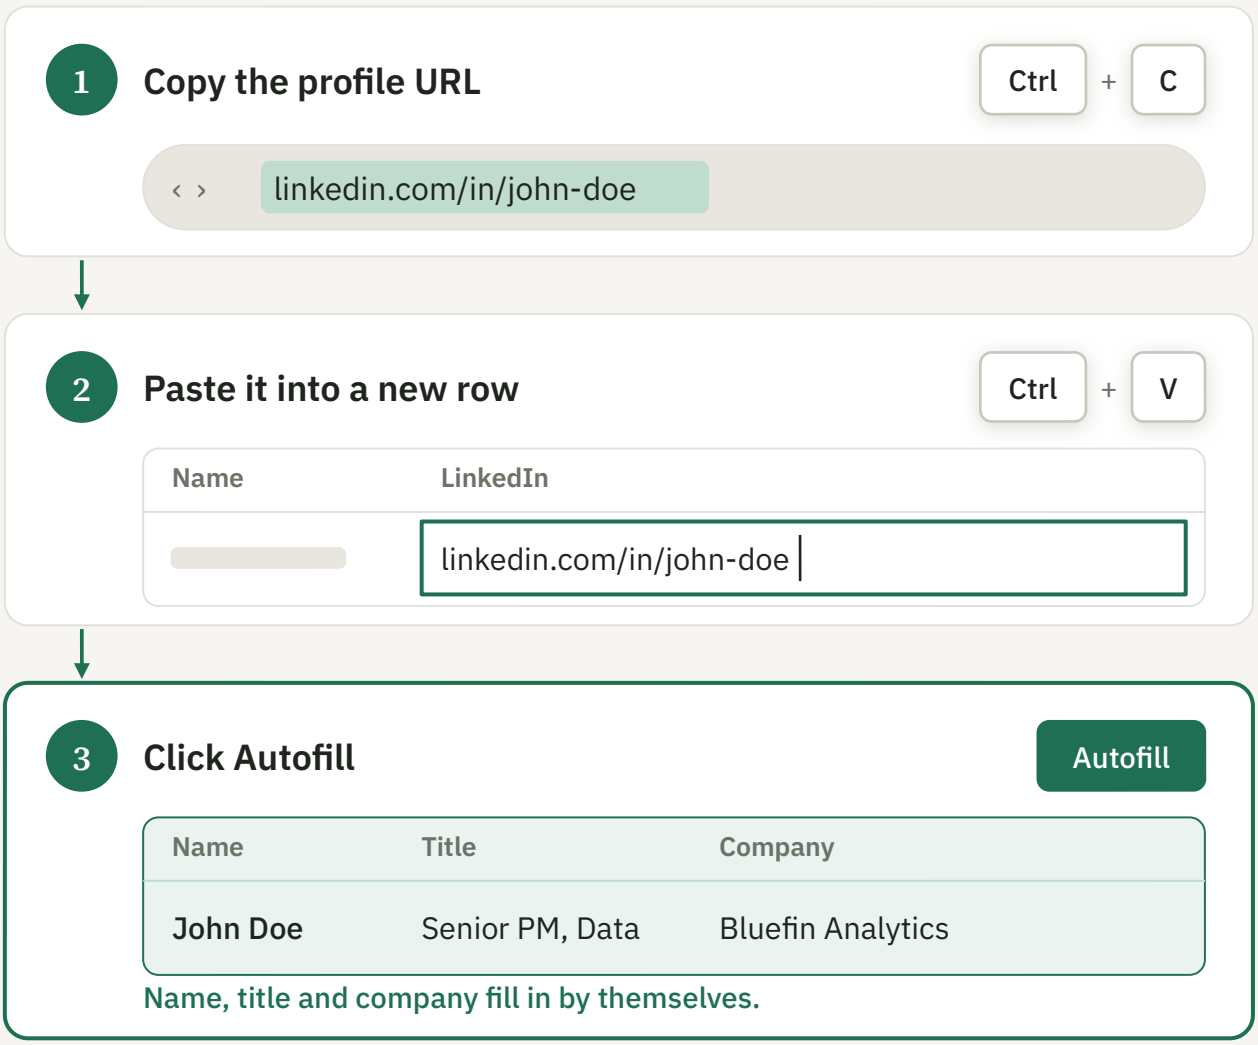

Name · Title · Company · Email · LinkedIn · How we met · Last contact · Format · Follow-up · Notes

Green fields feed the follow-up queue and the outreach charts.

DESIGN · LINKEDIN AUTOFILL

Copy, paste, done

Adding a new contact takes one copy, one paste and one click. No typing out names, titles or companies.

Works in any browser tab. If a profile can't be read, a screenshot of it works too. · Sample data

RESULT

Nothing slips through now

Every application, contact and recruiting email is in one place, and it already caught what I would have missed.

ONLY IN MY UT INBOX

2

rejections Gmail never showed me, caught and logged

EMAIL TO PIPELINE

< 1 day

from an email arriving to its stage updating

CONTACTS

52

in one grid, with every follow-up in one queue

LINKEDIN AUTOFILL

5 of 5

test profiles filled in full from just a link

Next: a six-phase plan to move it onto my own stack on Cloudflare. The roadmap is on the next slide.

WHAT'S NEXT

The roadmap

Release 1 runs inside Claude today. Six phases move it onto my own stack on Cloudflare, the same way I deployed Internship Watch.

PHASES	EPICS	USER STORIES
6	7	20
numbered 0 to 5	in the plan	in Jira and Linear

Deployment plan

Each phase ships on its own, so the CRM keeps working the whole way

0	**Access checks** Confirm every service the build needs	Done
1	**Foundation** Database schema, REST API, data migration, CI	Next
2	**Frontend port** One codebase for the artifact and the site	Planned
3	**Ship and secure** My own domain, locked behind Cloudflare Access	Planned
4	**Email feeds** Gmail and Outlook refreshed on an hourly cache	Planned
5	**Enrichment and Claude** LinkedIn lookup and updates by chatting with Claude	Planned

THANKS FOR READING

Follow the email, keep the contacts, paste the link.

Situation	Recruiting lived in two inboxes and LinkedIn.
Solution	One CRM that follows email, tracks contacts and reads LinkedIn.
Design	Email matched to the pipeline, a follow-up queue, one-link autofill.
Result	Two hidden rejections caught, and no follow-up left waiting.

The code is open on GitHub

github.com/HenryDMcGee/CRM

Built with Claude. Names and companies on the screens are made-up sample data.
